Advanced Data Modelling and Form Design

Aim

To design and develop an advanced Event Registration Form using Zoho Creator by implementing related forms, lookup fields, advanced field types, validations, and structured data relationships for efficient event registration management.

Theory

Advanced data modelling and form design involve organizing related data using appropriate forms, fields, relationships, and validation rules for efficient data collection and management. In Zoho Creator, advanced forms can use field types such as Lookup, Formula, Auto Number, Subform, Dropdown, Radio, Multi Select, Date, Email, Phone, and Number.

In this experiment, an **Event_Registration_Form** is designed to collect participant details, academic information, event details, registration information, and participant requirements. The form is connected with an **Events** form using a Lookup field to retrieve and associate event information. Advanced fields and validations are used to improve data accuracy and reduce duplicate data entry. The data model allows event information to be maintained separately while registrations are linked to the corresponding event. The submitted registration data can be displayed through reports for effective management and analysis.

Procedure

1. Open Zoho Creator and open the Event Registration System application.
2. Create the **Events** form to store event details.
3. Add fields such as Event Name, Event Description, Event Date, Venue, Maximum Participants, and Event Status.
4. Create the **Event_Registration_Form** for collecting participant registration details.
5. Add participant, contact, academic, and registration fields.
6. Create a Lookup field to connect the registration with the corresponding event.
7. Add suitable advanced fields such as Auto Number, Formula, and validation fields where required.
8. Organize the fields into suitable sections for structured data entry.
9. Configure mandatory fields and apply appropriate validation rules.
10. Save and preview the form.
11. Enter sample event and participant details and submit the registration form.
12. Verify that the selected event details are correctly associated with the registration.
13. Create the **Event_Registration_Report** and verify the submitted records.
14. Filter the records based on event, registration status, and other relevant fields.

Output

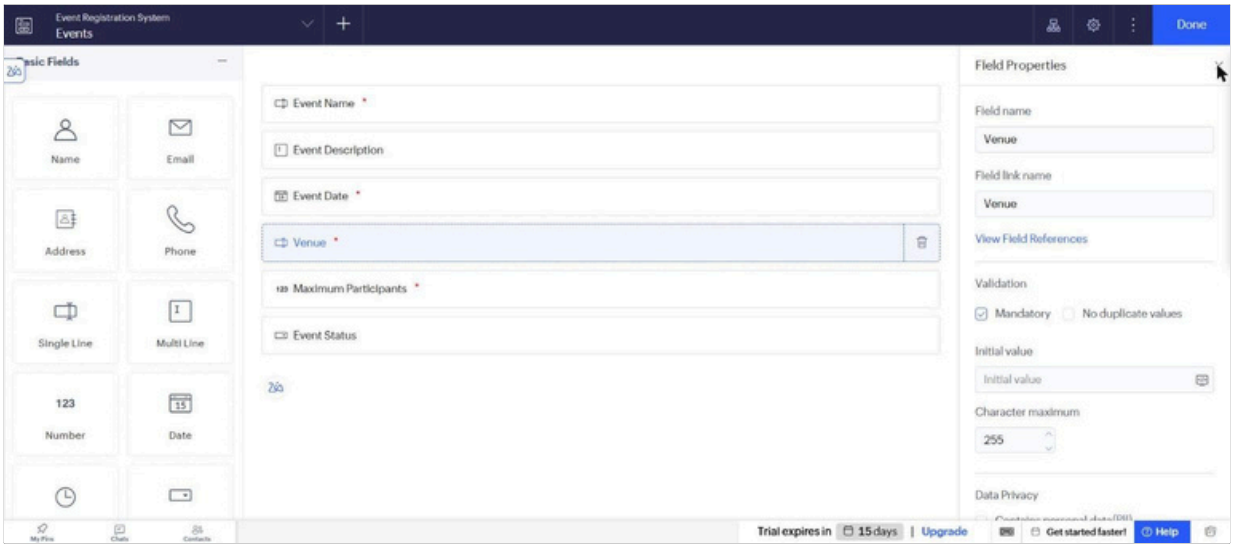

Fig. 4b.1: Events Form Design

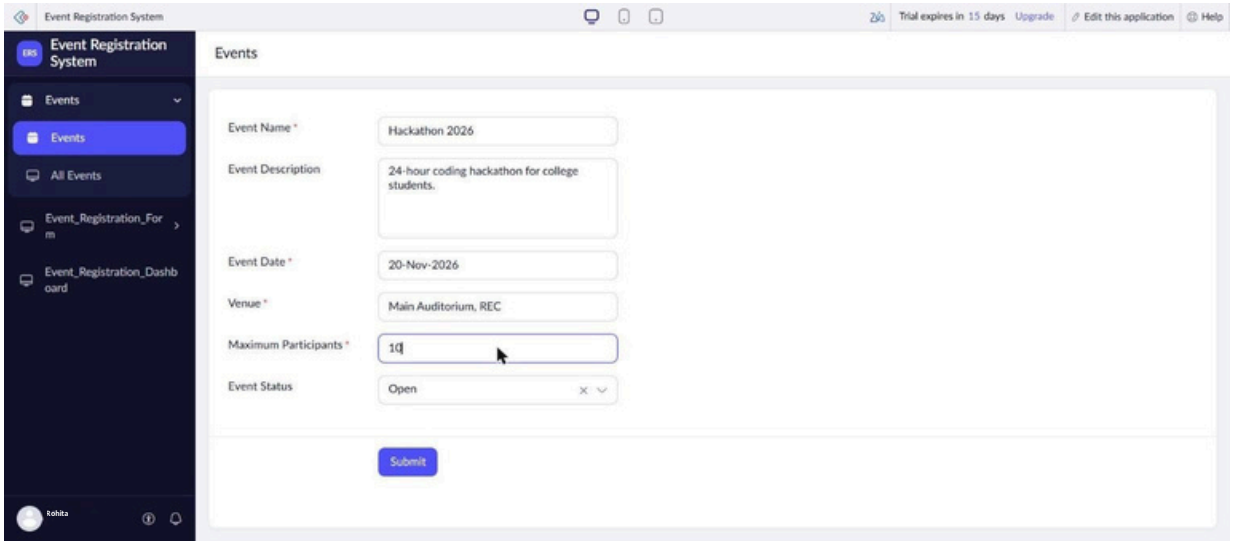

Fig. 4b.2: Sample Event Details Entered

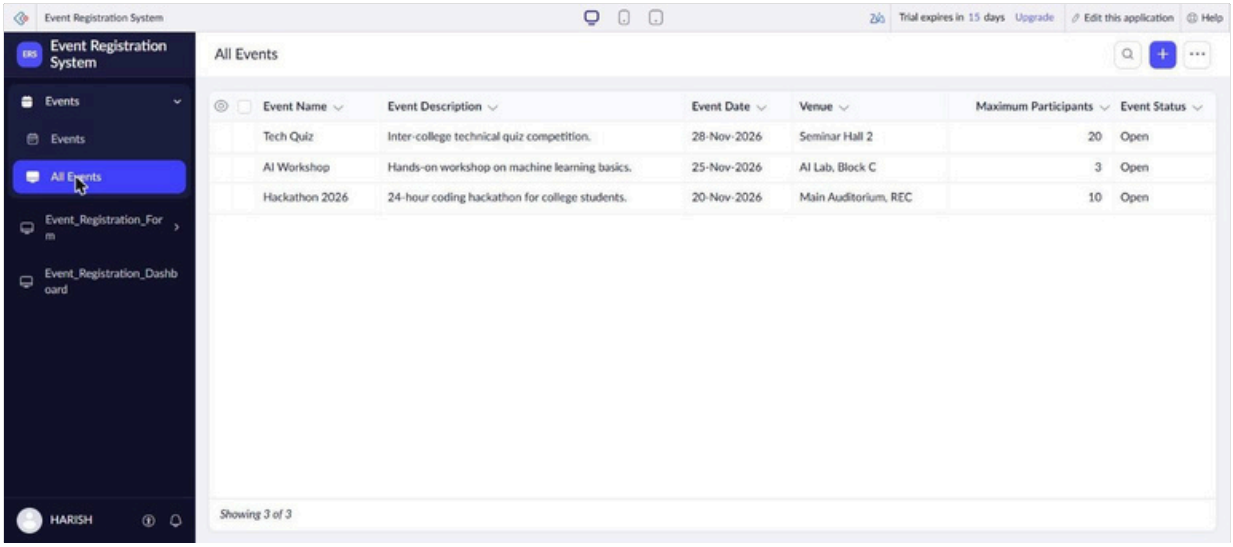

Fig. 4b.3: Events Stored in the All Events Report

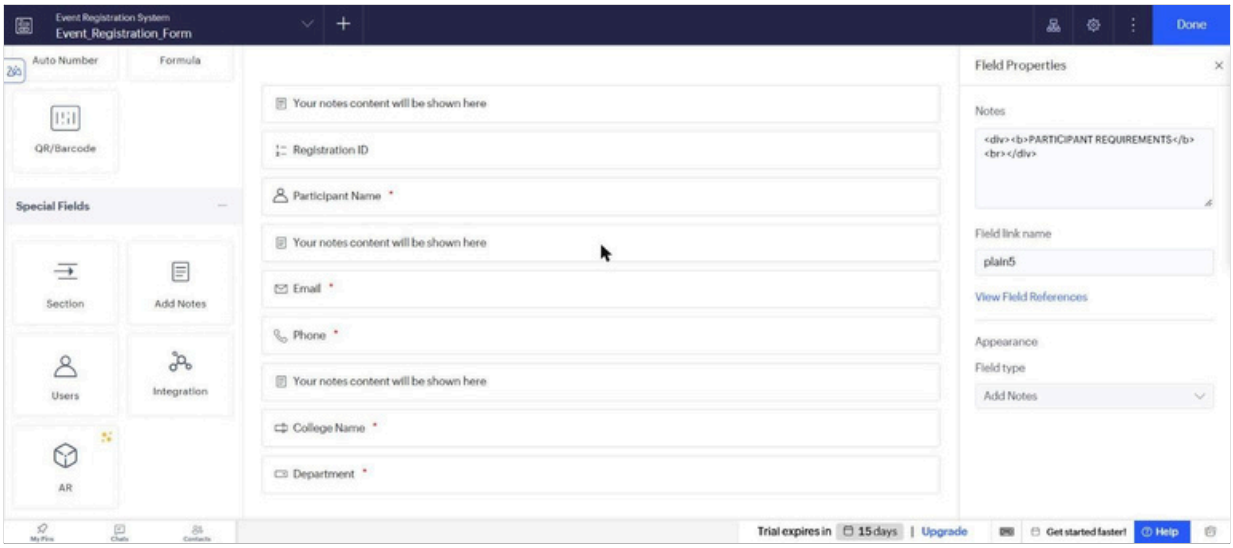

Fig. 4b.4: Registration Form with Auto Number, Lookup and Advanced Fields

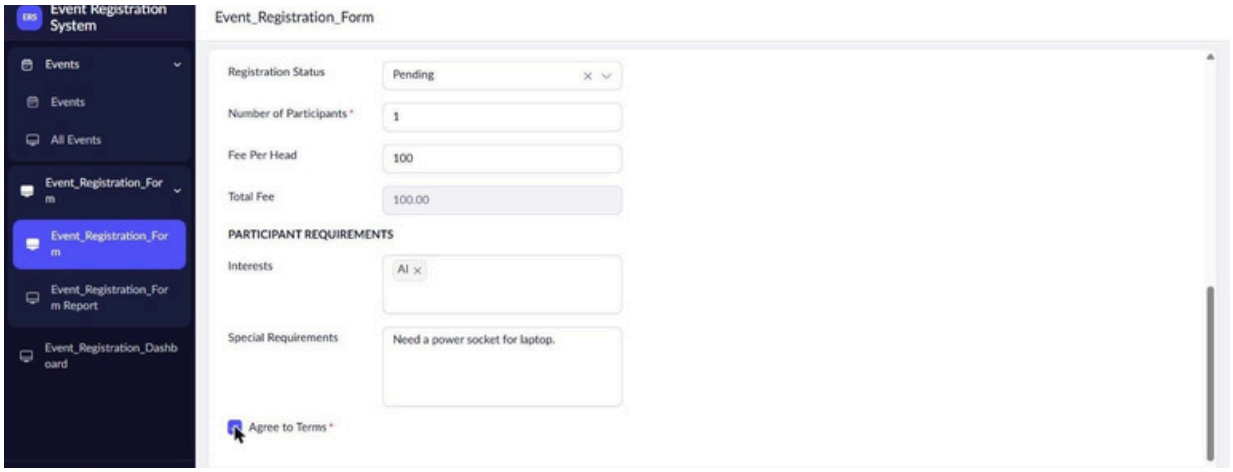

Fig. 4b.5: Formula Field (Total Fee) and Participant Requirements

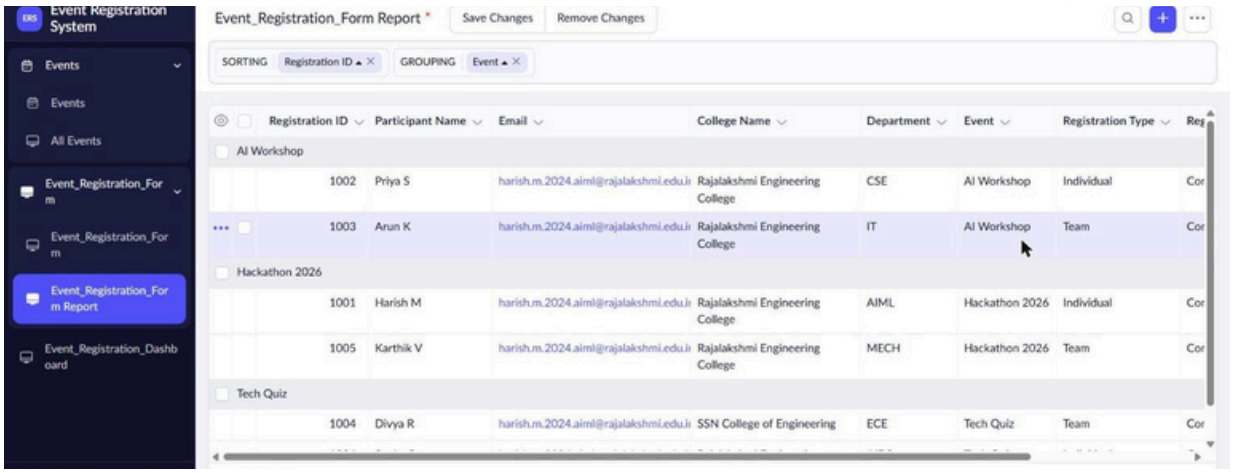

Fig. 4b.6: Registrations Associated with their Events (Lookup)

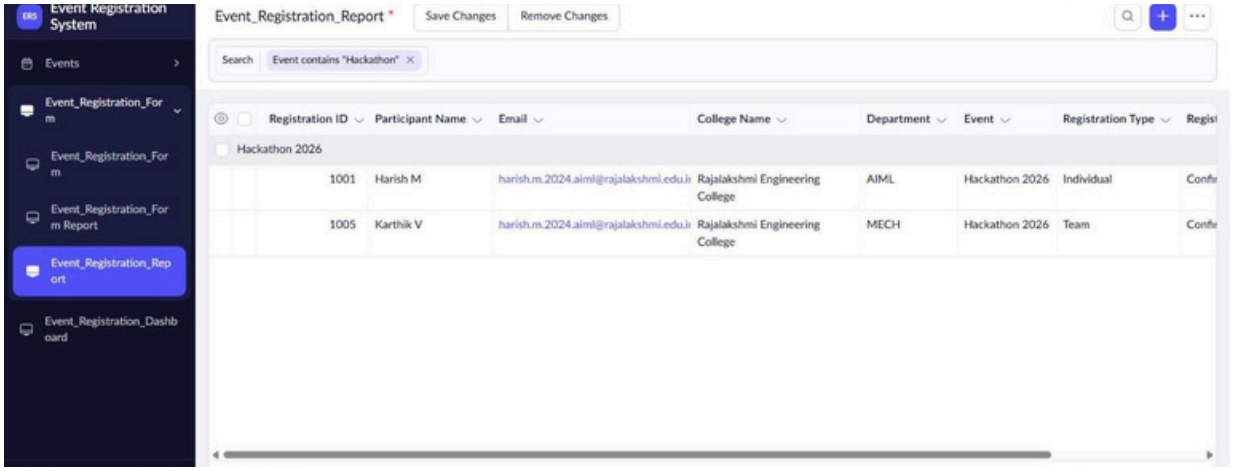

Fig. 4b.7: Records Filtered by Event

Result

The Advanced Event Registration Form was successfully created in Zoho Creator using advanced data modelling techniques, related forms, lookup fields, appropriate validations, and structured sections. The event and registration data were successfully linked and stored for effective management and reporting.
