Reports

Aim

To create and configure reports in Zoho Creator for displaying, organizing, filtering, and managing event registration data collected through the Event Registration Form.

Theory

Reports in Zoho Creator are used to display and manage the data submitted through forms. They provide different ways to view stored records, such as list, table, summary, and grouped reports. Reports can be customized using filters, sorting, grouping, and selected fields.

In this experiment, an **Event_Registration_Report** is created to display participant registration details. The report can be filtered based on event name, registration status, department, and other relevant fields. Sorting and grouping options are used to organize the records for easier viewing and management.

Procedure

1. Open the Event Registration System application in Zoho Creator.
2. Open the Event Registration Form containing the submitted registration records.
3. Create a new report for the Event Registration Form.
4. Select the required fields such as Participant Name, Email, College Name, Department, Event, Registration Type, and Registration Status.
5. Configure the report in a suitable table/list format.
6. Apply sorting to arrange the registration records appropriately.
7. Group the records based on Event Name or Registration Status.
8. Apply filters to view registrations based on event, department, and registration status.
9. Add sample registration records if required.
10. Save and preview the report.
11. Verify that the submitted registration records are displayed correctly.

Output

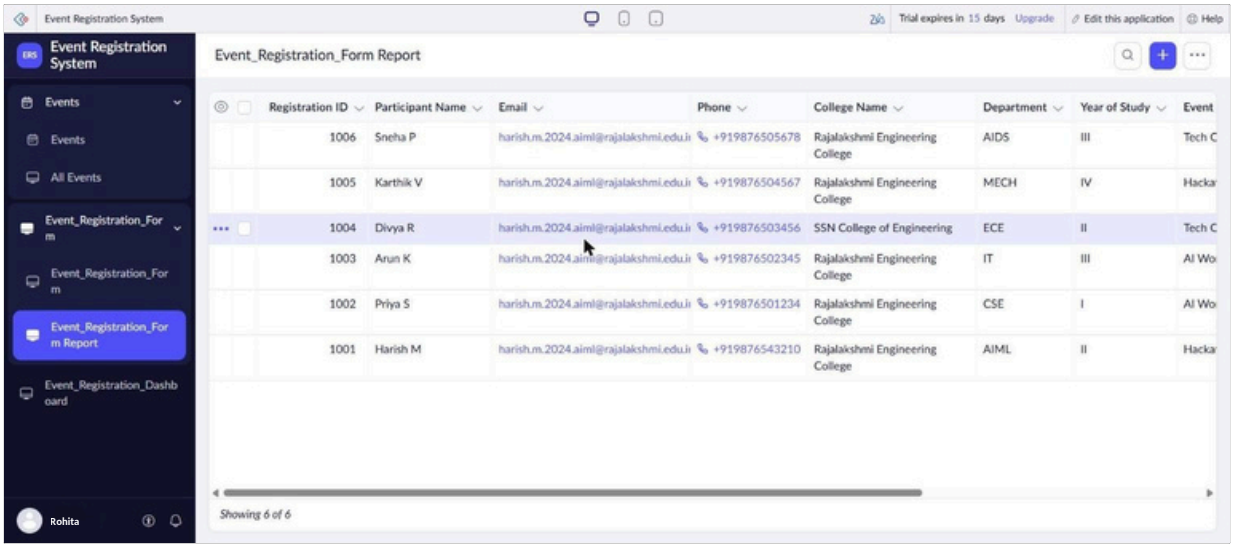

Fig. 5a.1: Submitted Registration Records

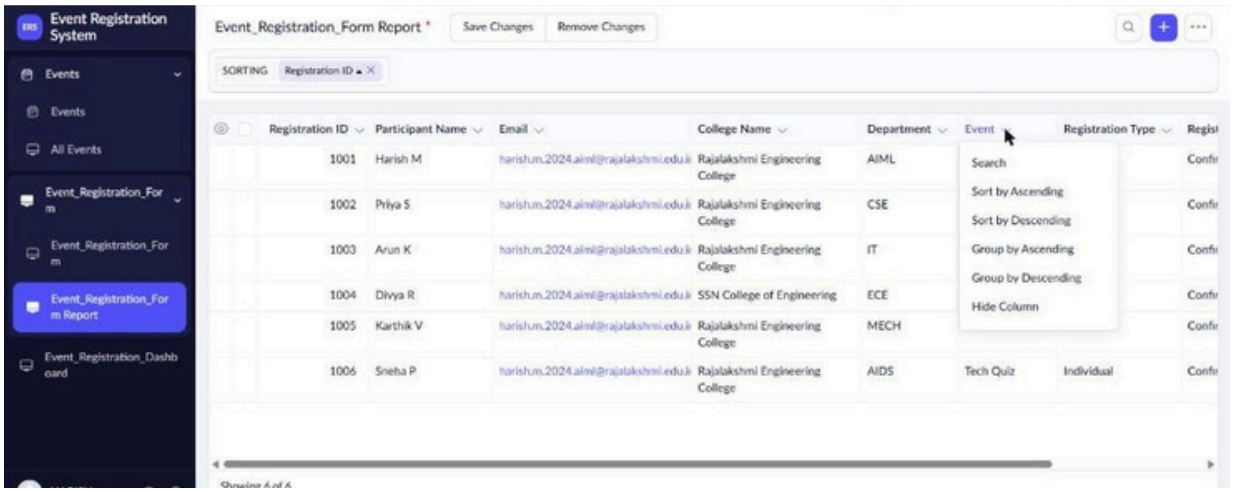

Fig. 5a.2: Sort and Group Options in the Report

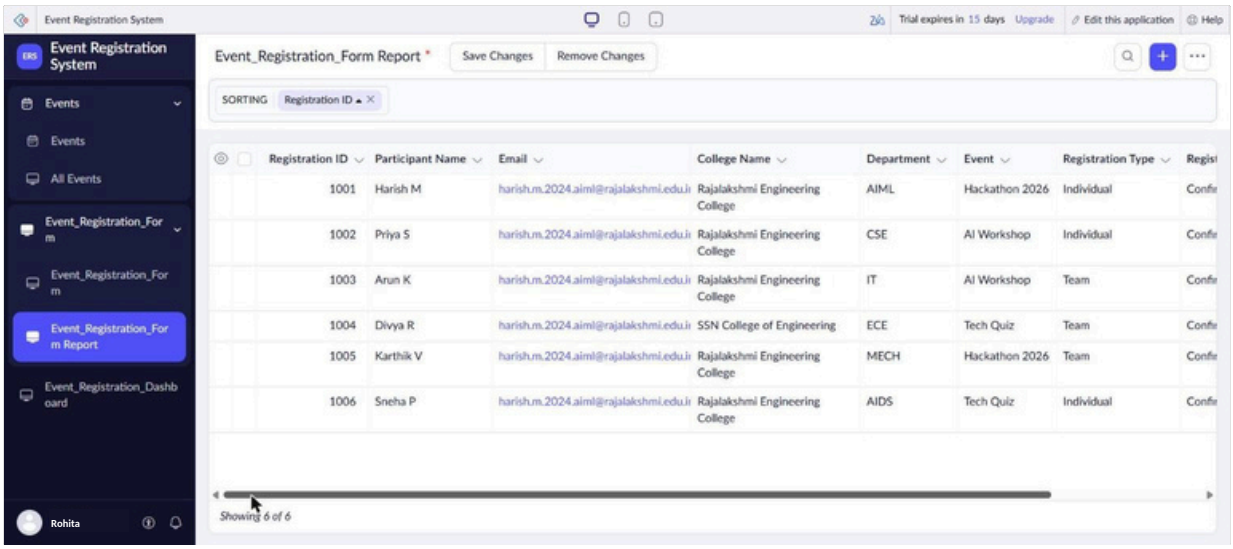

Fig. 5a.3: Records Sorted by Registration ID

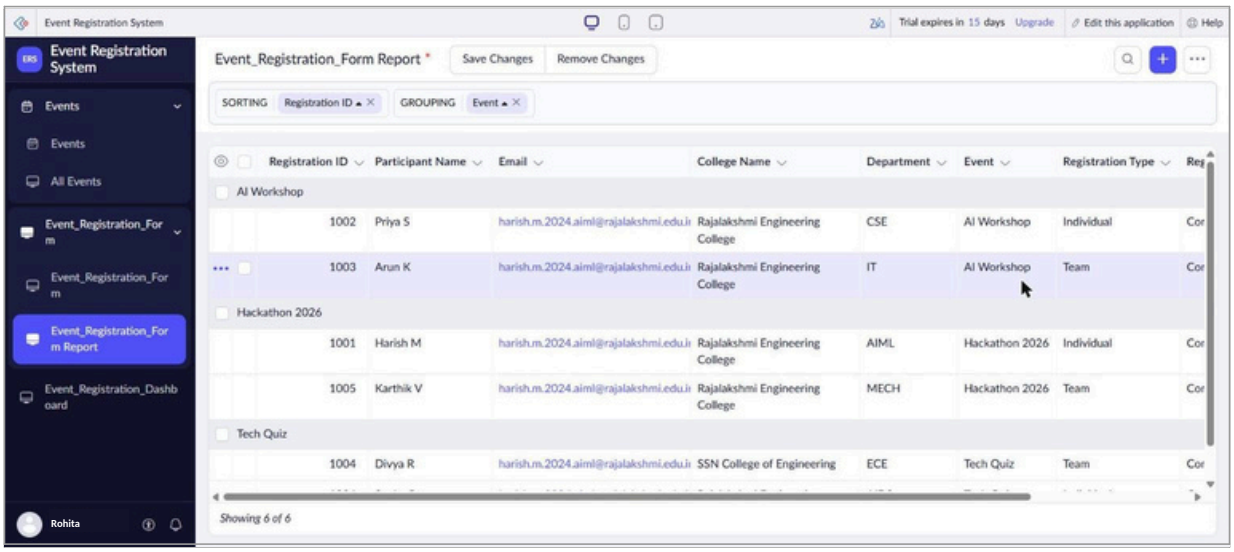

Fig. 5a.4: Records Grouped by Event

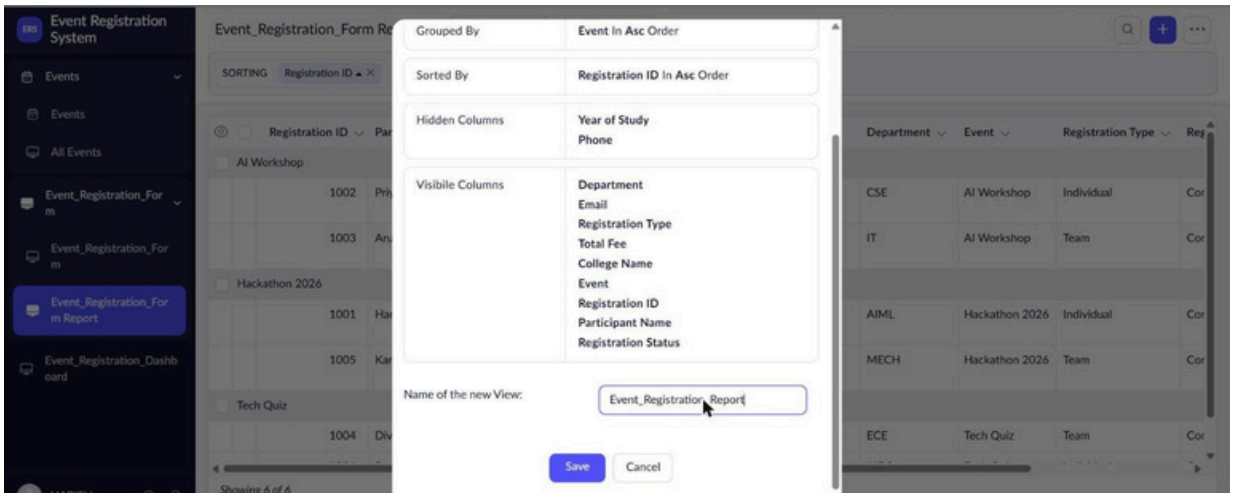

Fig. 5a.5: Saving the Event_Registration_Report

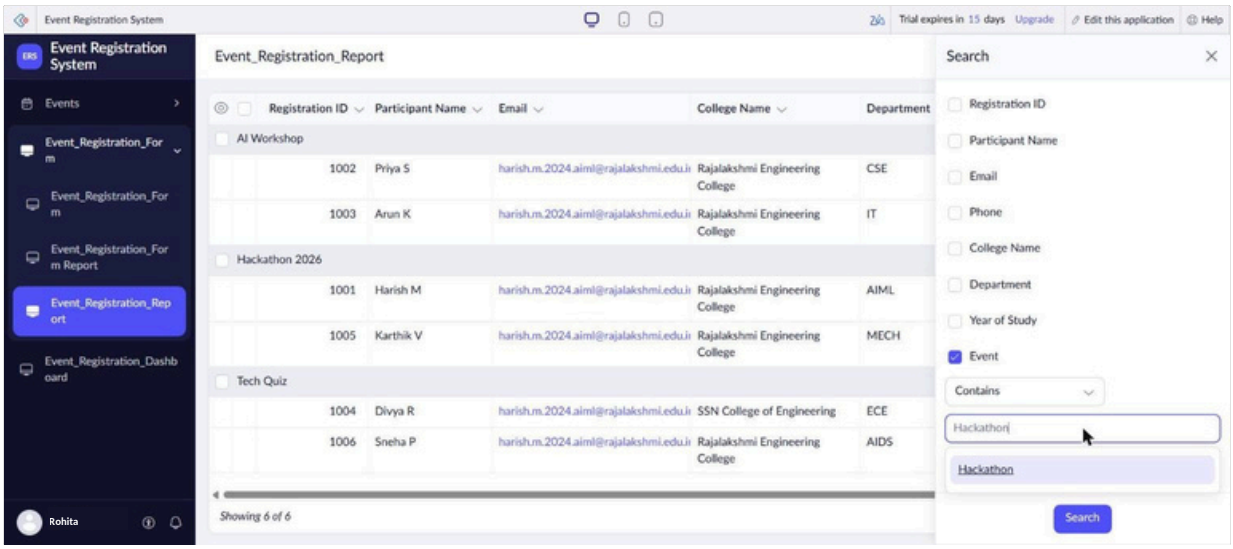

Fig. 5a.6: Applying a Filter on Event

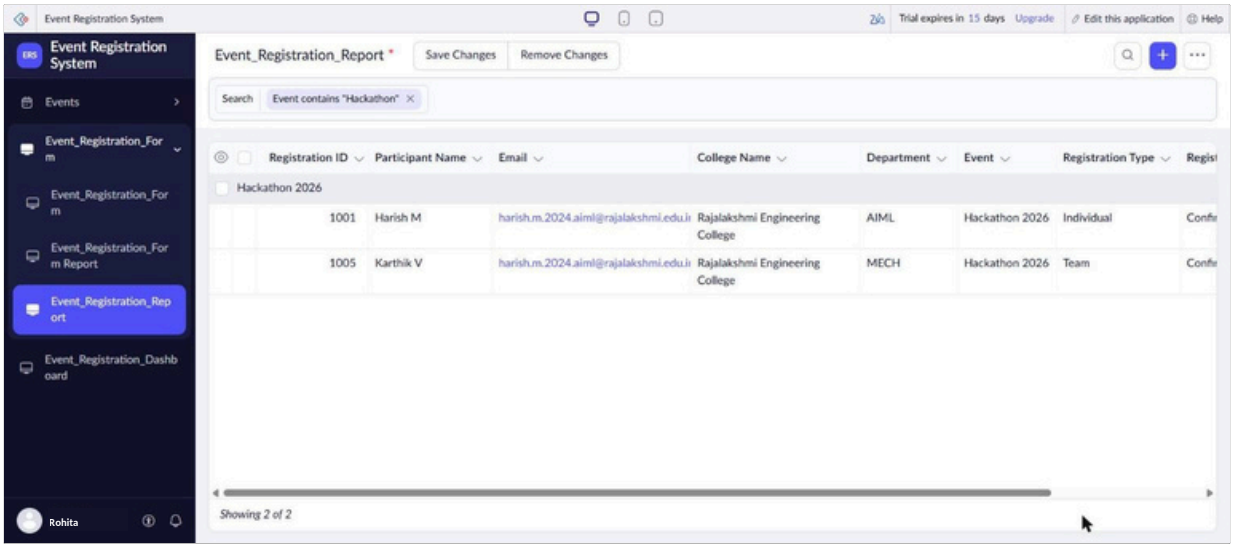

Fig. 5a.7: Filtered Registration Records

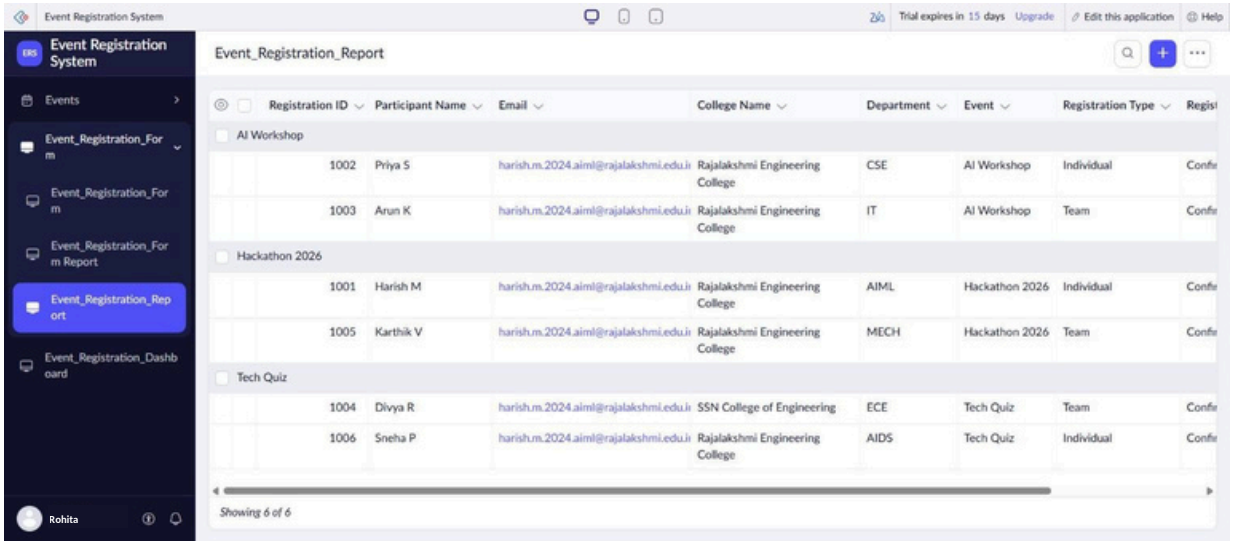

Fig. 5a.8: Final Event_Registration_Report

Result

The Event_Registration_Report was successfully created in Zoho Creator. The submitted registration records were displayed in an organized format with suitable sorting, grouping, and filtering options, enabling effective viewing and management of event registration data.
