Workflow

Aim

To create and configure workflows in Zoho Creator for automating actions and managing event registration processes based on form submissions and record updates.

Theory

Workflows in Zoho Creator are used to automate tasks and business processes based on specific events or conditions. A workflow can be triggered when a record is created, edited, or when a particular condition is satisfied. Actions such as updating fields, sending emails, and executing Deluge scripts can be performed automatically.

In this experiment, workflows are configured for the Event Registration System to automate registration-related activities. The workflows are used to manage registration status, record submission details, check event capacity, and send confirmation notifications.

Procedure

1. Open the Event Registration System application in Zoho Creator.
2. Open the Event Registration Form.
3. Navigate to the Workflow section.
4. Create a workflow that triggers when a new registration is successfully submitted.
5. Configure an action to automatically set the Registration Date.
6. Configure the Registration Status based on the registration details.
7. Create a workflow to check the maximum participant capacity of the selected event.
8. Configure an appropriate action when the event reaches its maximum capacity.
9. Create a workflow to handle changes in the Registration Status.
10. Add an email notification action to send confirmation to the participant after successful registration.
11. Save and enable the configured workflows.
12. Submit sample registration records and verify that the workflows execute correctly.
13. Check the updated registration records and notification results.

Output

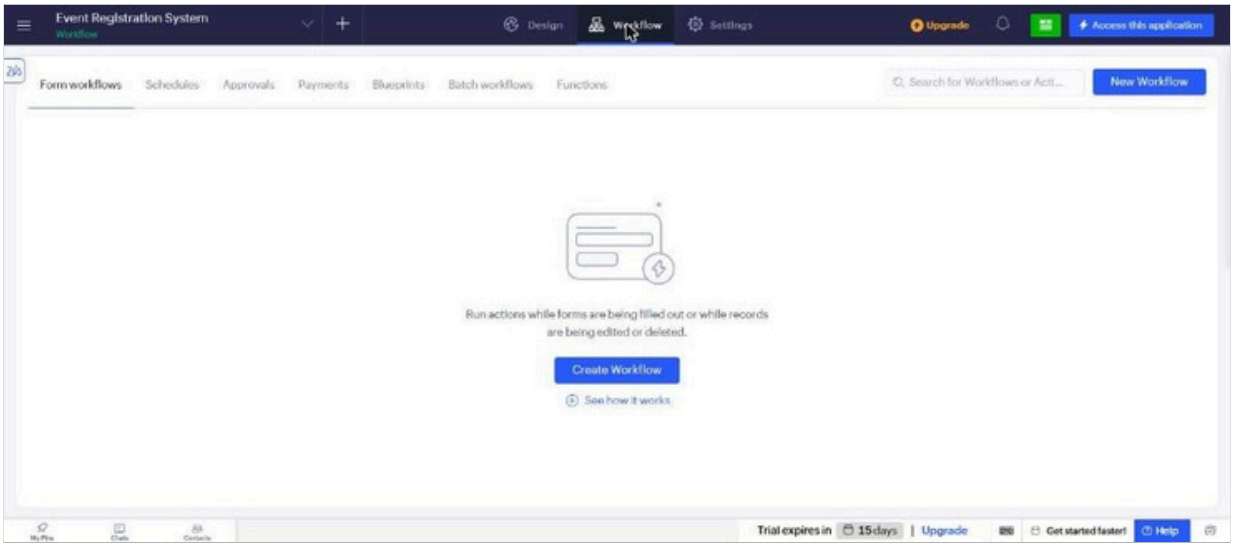

Fig. 6.1: Workflow Section of the Application

Result

The workflows were successfully created and configured in Zoho Creator for the Event Registration System. The configured workflows automated registration-related actions, status management, event capacity handling, and participant notifications, reducing the need for manual processing.
