EXP 9	**Implementing AI and analytics features using Zoho Creator's built-in Zia capabilities**

Aim:

To usethe AI and analytics features of Zoho Creator (Zia, reports, charts and dashboards) in the **Event Registration System** to study registration data and support decision making.

Theory:

Ziaisthe AI assistant built into Zoho products. In Zoho Creator, Zia can help to create applications from a description, suggest fields, answer questions about data, and find patterns. Along with Zia, Creator gives analytics tools such as reports with grouping, filters, charts, KPI widgets and dashboards built with the Page Builder.

- **AI features:** Zia app creation, field suggestions, prediction, keyword extraction, object detection and sentiment analysis.
- **Analytics features:** Group by, sort, filter, aggregate (count, sum), charts and KPI widgets.
- **Dashboards:** Pages that combine many widgets and reports into one screen for quick viewing.

Application in Event Registration System:

The registration data is studied tofindhow many people registered for each event, how many seats are left, which events are full, and how many registrations are Confirmed or Waitlisted. This helps the organiser decide whether to add more seats or close an event.

Procedure:

1. Open the Event Registration System in Zoho Creator.
2. Open the Zia option in the application builder and try the AI assistant features.
3. Open the **Event_Registration_Report** and group the records by Event Name.
4. Apply filters to view only Confirmed registrations.
5. Open the Page Builder and create the **Event_Registration_Dashboard** page.
6. Add KPI widgets for total registrations and charts for registrations per event.
7. Add the registration report to the dashboard and save the page.
8. Study the charts and record the observations.

Output:

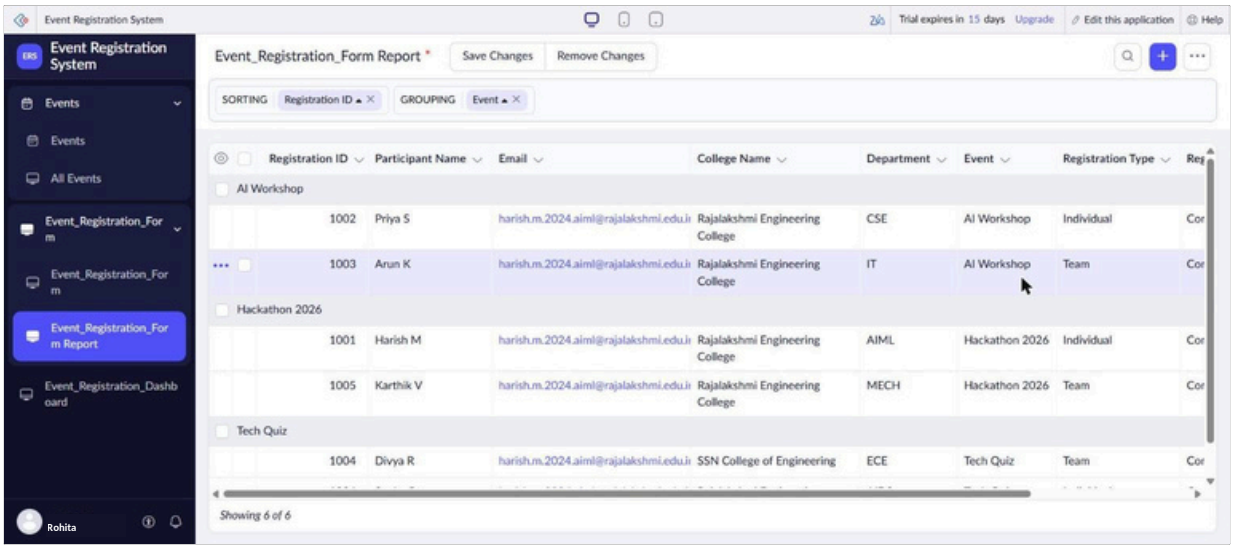

Fig. 9.1: Registrations Grouped by Event

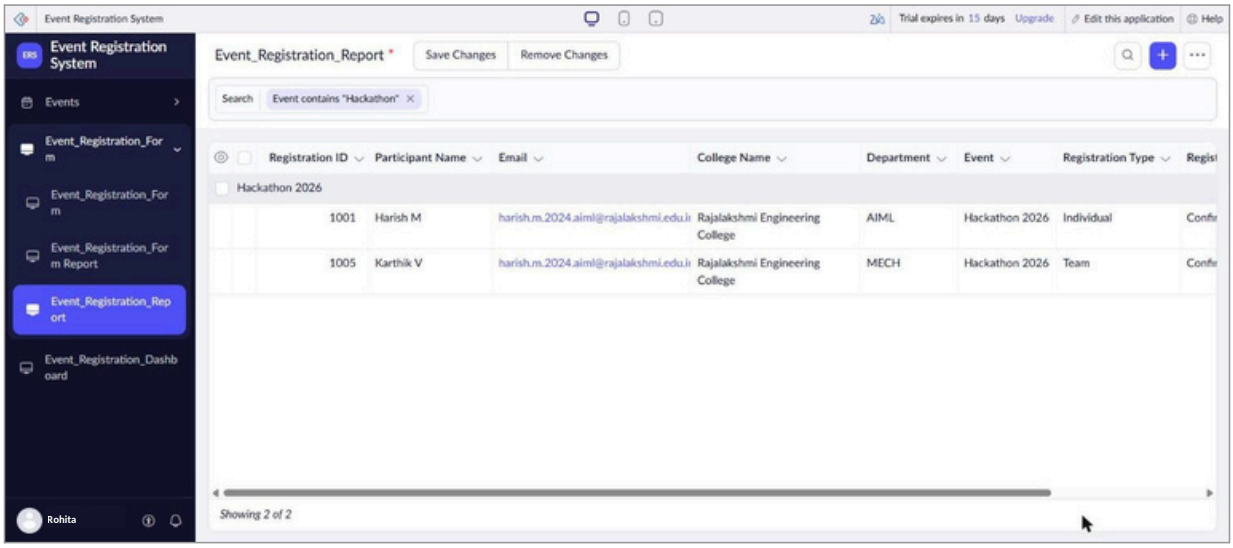

Fig. 9.2: Filtered Analysis of Registrations

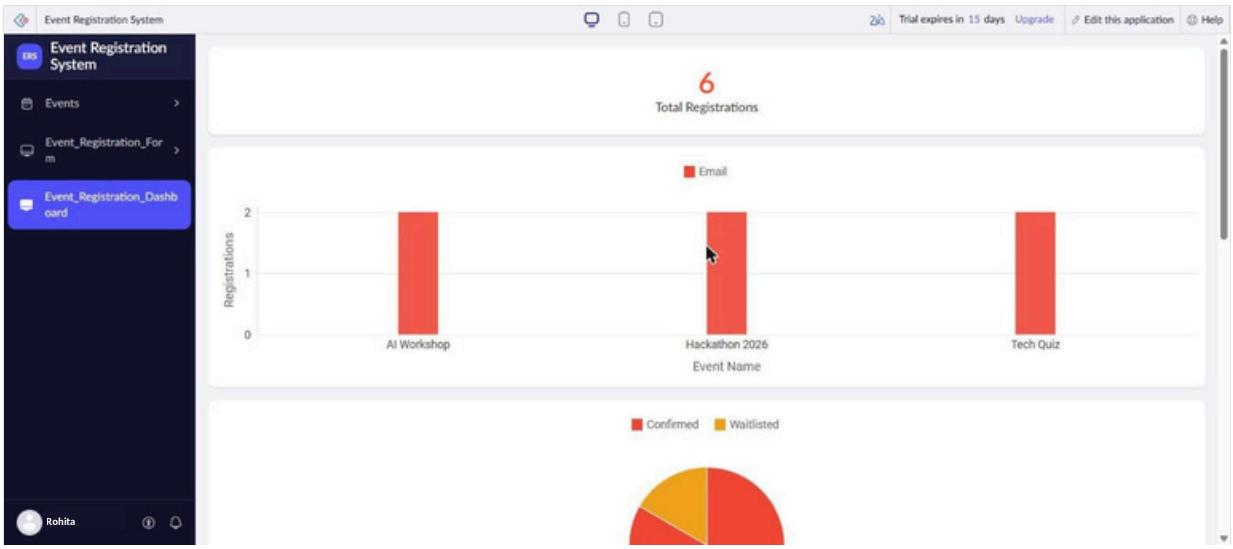

Fig. 9.3: Dashboard with KPI Widgets

Fig. 9.4: Charts Showing Registrations per Event

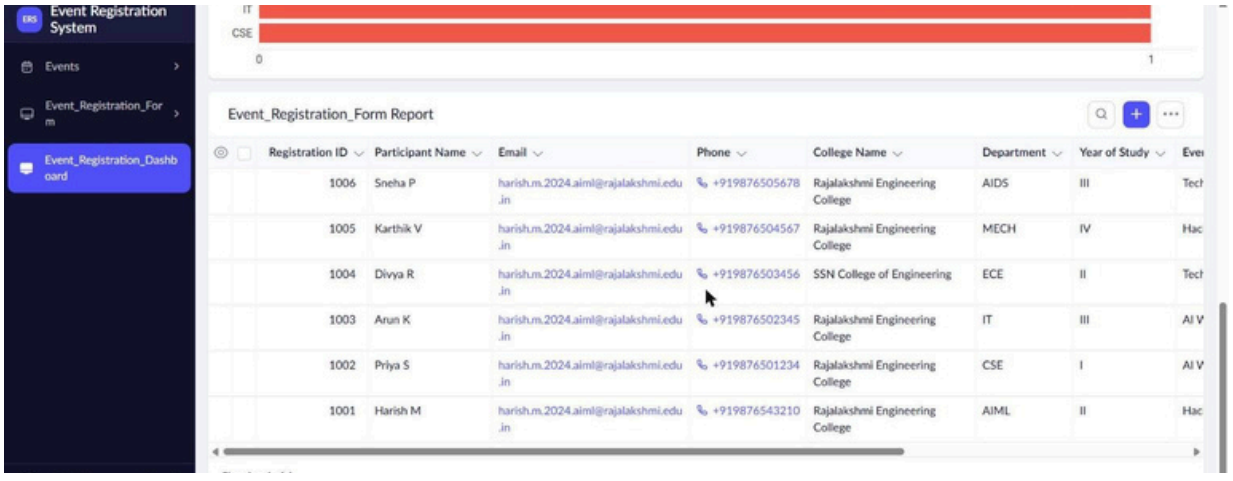

Fig. 9.5: Registration Report on the Dashboard

Observation:

Event	Max Seats	Confirmed Participants	Seats Left	Status
Hackathon 2026	10	5	5	Open
AI Workshop	3	3	0	Closed
Tech Quiz	20	3	17	Open

Note: The Zia AI assistant did not respond properly on the trial account, so the analysis was done using the built-in reports, charts and dashboard of Zoho Creator.

Result:

The analytics features of Zoho Creator were used in the Event Registration System. Reports, charts and the dashboard clearly showed registrations per event, seats left and the status of each event.
