EXP 11	Deploying a Zoho Creator application from development to production environment

Aim:

To deploy the **Event Registration System** from the development environment to the stage and production environments using the Environments feature of Zoho Creator.

Theory:

In software development, changes are first made and tested in a safe place before real users see them. Zoho Creator gives three environments for this:

- **Development:** A copy of the app where the developer makes and tests changes. Real users do not see it.
- **Stage:** A testing environment where selected testers check the changes before they go live.
- **Production:** The live application used by real users.

Each publish creates a new **version** (1.0, 1.1, ...). The **Version History** keeps a record of every publish, so an older version can be checked if a problem comes up. This process makes deployment safe and controlled.

Procedure:

1. Open Zoho Creator and click **Deploy** > **Environments**.
2. The Environments page is empty at first. Click to add the application.
3. Select the **Event Registration System** application and confirm.
4. Zoho Creator creates the development copy of the app; the live app becomes **Production 1.0**.
5. Open the **Publish** menu of the development app.
6. Publish the app to **Stage** for testing.
7. After testing, publish to **Production**.
8. Check the version numbers and open the Development menu to view Edit, Access, Settings, Logs and Export options.

Output:

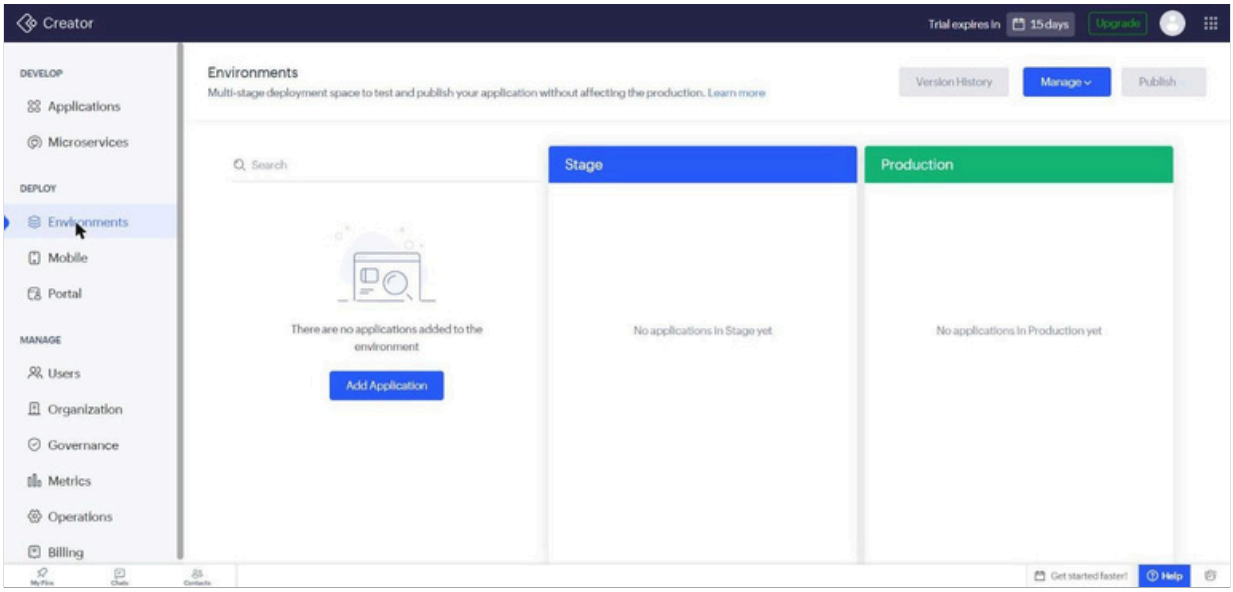

Fig. 11.1: Environments Page Before Adding the Application

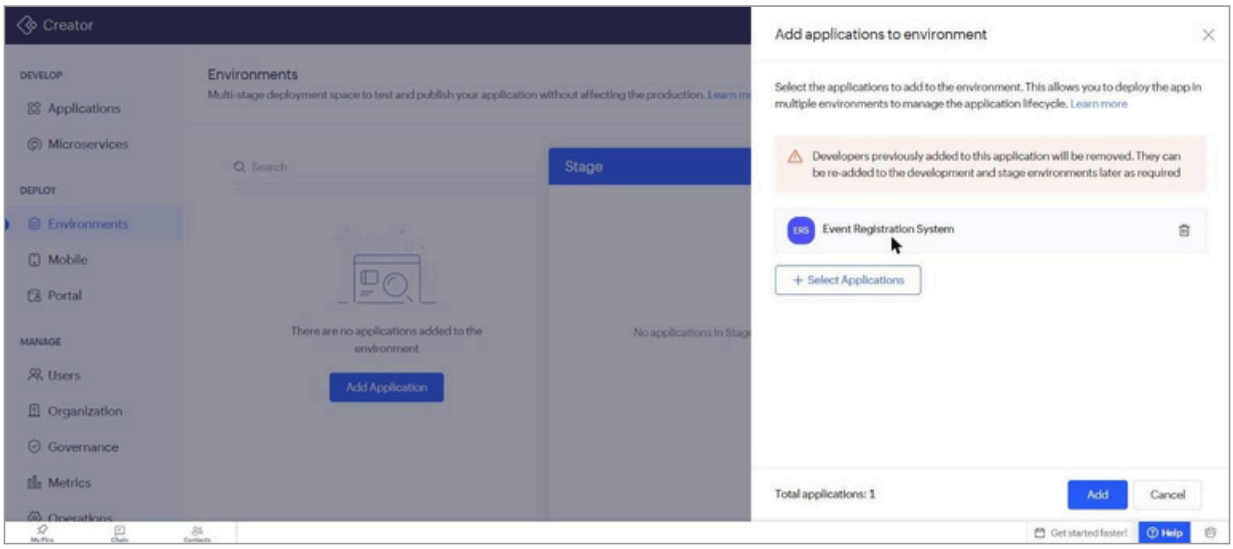

Fig. 11.2: Adding the Event Registration System to Environments

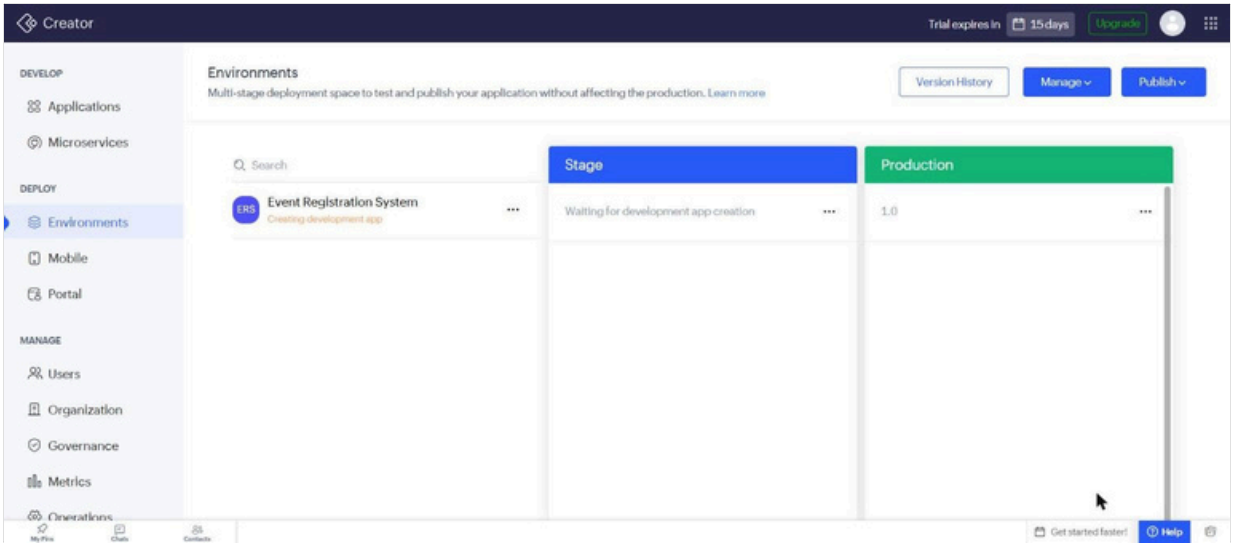

Fig. 11.3: Creating the Development Environment

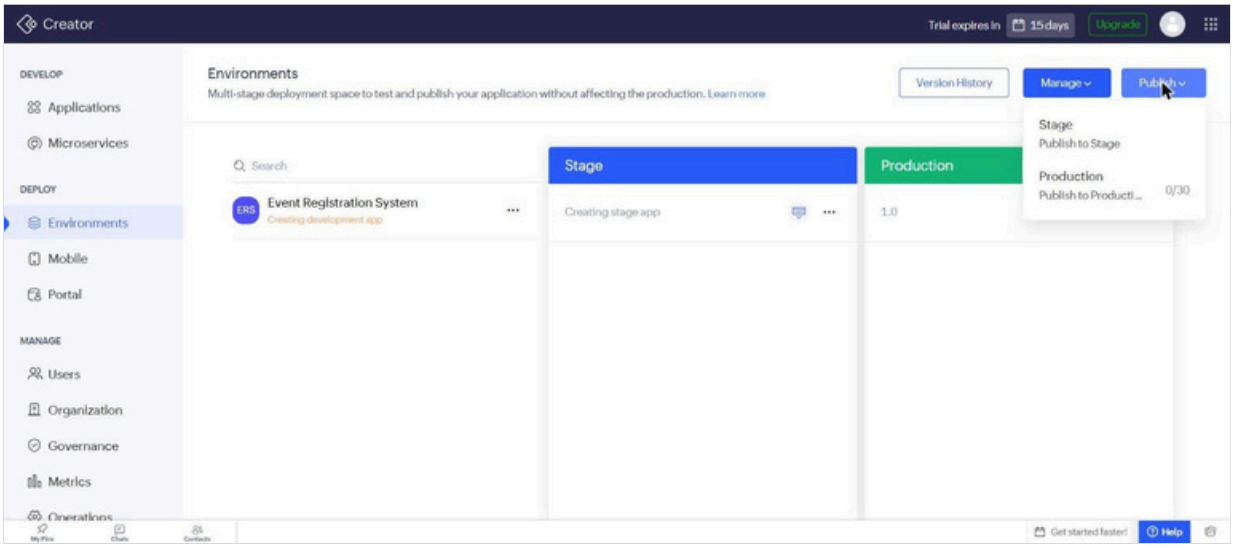

Fig. 11.4: Publish Options - Stage and Production

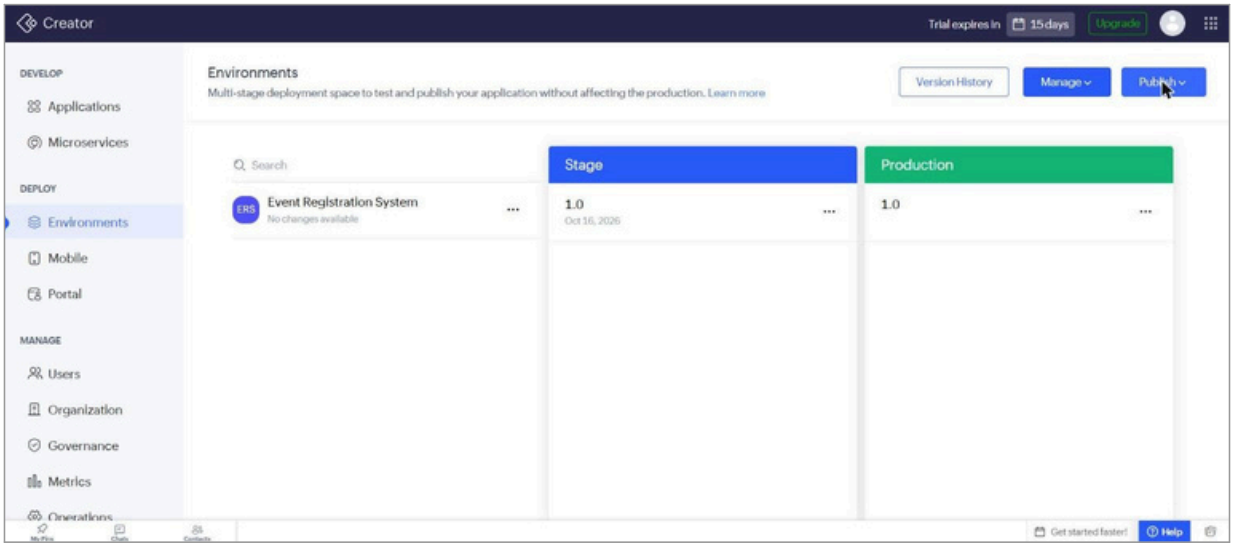

Fig. 11.5: Application Published to Stage 1.0 and Production 1.0

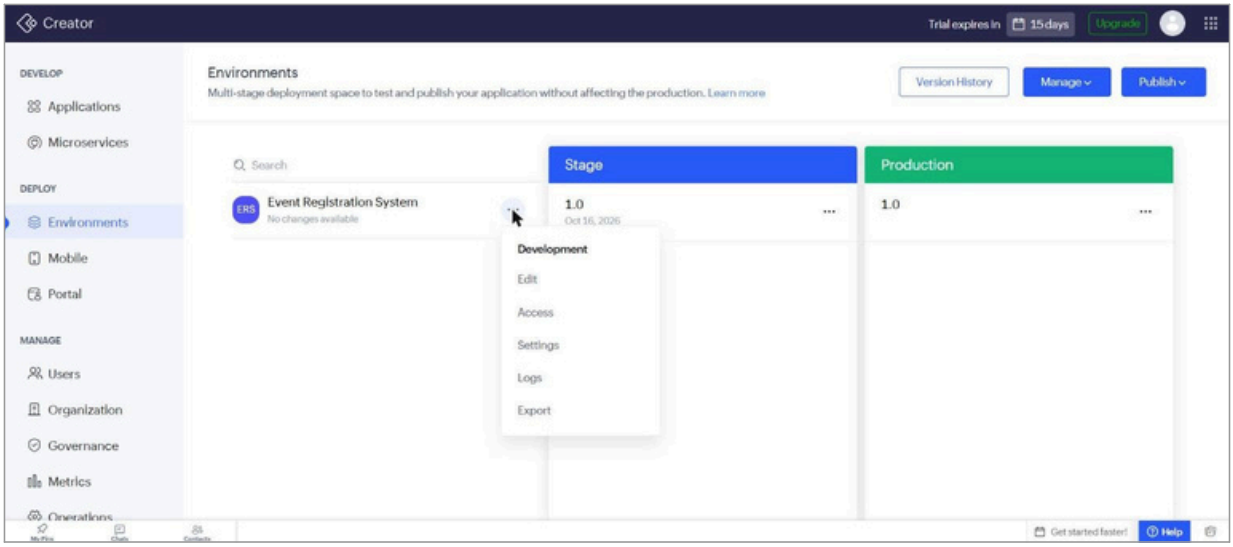

Fig. 11.6: Development Environment Options

Observation:

Environment	Purpose	Version
Development	Make and test changes	Working copy
Stage	Testing by selected users	1.0
Production	Live app used by participants	1.0

Result:

The Event Registration System was successfully moved from development to stage and production environments in Zoho Creator, with version control for each publish.
